

Editor Pro version 1.0.0

Setup Guide

The tool requires Game Creator 2 and can't work without it.

Setup

1. [Setup and install Game Creator 2](#)
2. Download and install **Editor Pro | Game Creator 2** from the package manager

Then you can open the tool under Game Creator > Editor Pro in the Unity toolbar.

Optionally, you can install the example content.

Installing the Example Content

Open the Game Creator Install Window by going to Game Creator > Install..

Select the Editor Pro | Game Creator 2 Examples and click Install

The example content can then easily be found in the Editor Pro window. It adds one Global Name Variable asset, one Global List asset, and one Basic State Locomotion asset

Editor Pro automatically adds any supported assets to the editor as soon as they are installed, making them ready for instant use.

For any issues, questions or suggestions, feel free to contact me.

You can get in touch with me on Discord: **lexsern** or send me an email at controltower@fullscreen.no

Updating Editor Pro

When there is a new release, we recommend you to first uninstall the old version.

You can do that by going to the Unity toolbar, Game Creator > Uninstall > Editor Pro

The Toolbar

Change view

Switches between grid and list view

Refresh

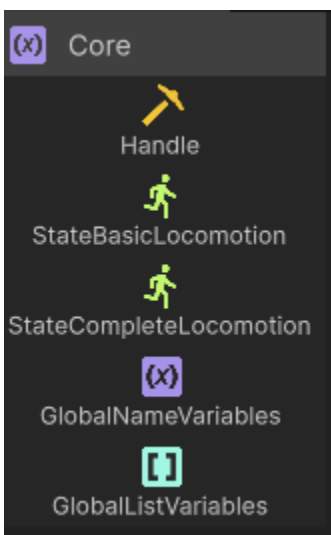

Refreshes the objects in the list. Useful if you just add a new icon to a scriptable object, or if you created a new scriptable object outside Editor Pro window

The Main Menu

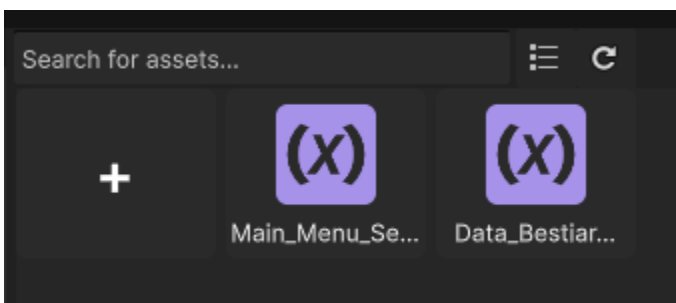

The main menu displays all supported assets in separate categories.

What you see depends on the assets you have installed. By default, you'll have Game Creator 2's Core available.

Click on any item in the main menu to expand it and see the types of supported scriptable objects you can open and edit.

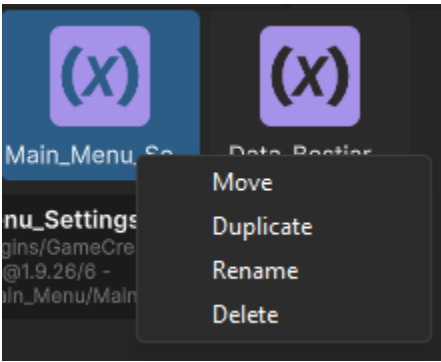

The grid

When clicking on a item, the custom inspector will show all the information about the assets you currently have open, just like a regular Unity inspector does.

Right click an asset to bring up the action menu

Move asset(s)

Moves the selected scriptable objects

Duplicate asset

Duplicates the selected scriptable object

Rename asset

Renames the selected scriptable object

Delete asset(s)

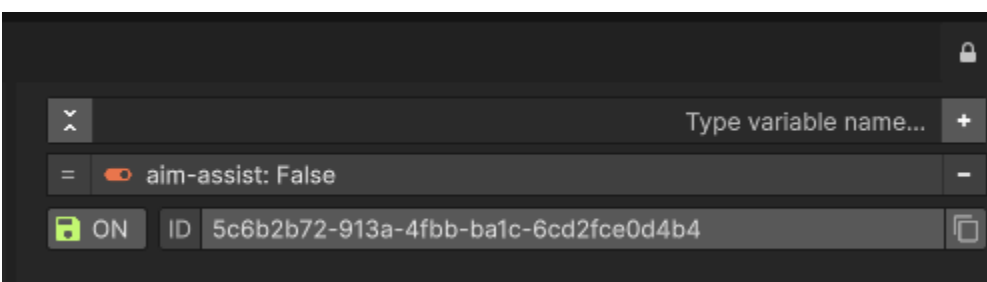

Deletes the selected scriptable objects

Create a new asset

Creates a new scriptable object of the same type you currently have open.

The Inspector

After clicking on any of the scriptable objects in the list, the inspector will update with that scriptable object. This inspector works pretty much like the normal unity inspector. If you select multiple scriptable objects at the same time, you can scroll down with the scrollbar that shows up.

Lock or unlock the inspector by clicking on the button on the top left side of the inspector.

Supported Assets and Types

Game Creator 2 Core

- Global Name Variable
